## 1 Introduzione alla metodologia di calcolo

### 1.1 Premessa

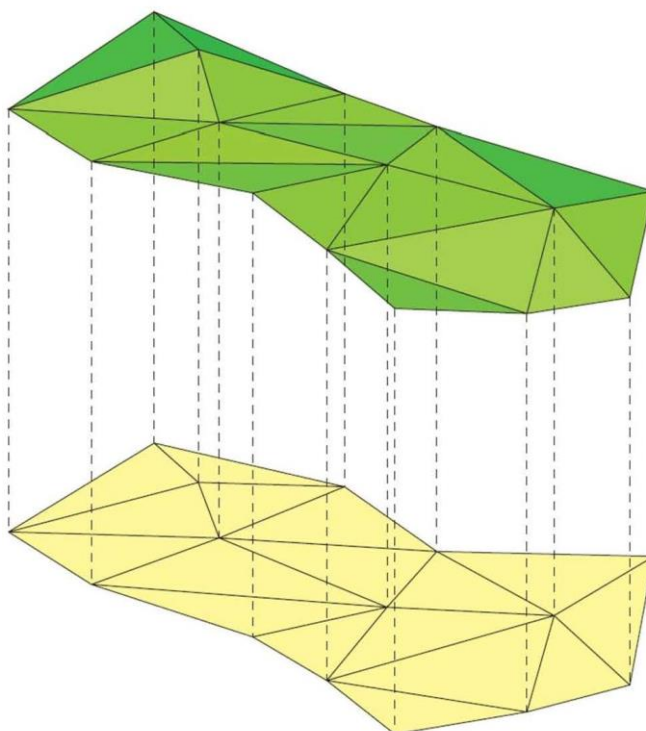

Nel caso di sbancamenti localizzati relativi a sistemazioni di porzioni di territorio di dimensioni contenute il rilievo topografico è alla base dello studio del calcolo dei volumi di sbancamento.

Detti volumi vengono determinati facendo riferimento a un modello geometrico costituito da una sequenza continua di prismi generici (perlopiù a sezione triangolare), cioè di un solido aventi gli spigoli della superficie laterale tra loro paralleli (e verticali), e le basi costituite da piani disposti in modo qualunque (dunque non paralleli). Il prisma generico differisce dal prisma regolare per il mancato parallelismo delle basi.

La superficie fisica del terreno è rappresentabile con un piano quotato i cui punti definiscono una superficie poliedrica formata da una serie continua di falde triangolari, che costituiscono la base superiore del prisma generico, mentre la base inferiore è perlopiù contenuta in un piano orizzontale o inclinato.

Quando il terreno viene rappresentato con un piano quotato si assume che la sua superficie sia schematizzata con una sequenza continua di piccoli piani (falde) triangolari.

In questo caso si genera un insieme continuo di prismi a sezione triangolare i cui spigoli non solo sono paralleli ma sono anche verticali.

*Fig. 1 – Schema dei prismi a sezione triangolare*

## 1.2 Volume dei solidi prismatici

Il volume di un solido prismatico (spigoli paralleli) è fornito dal prodotto tra l'area della sezione normale  $S_0$  (ortogonale agli spigoli) e la distanza  $h_G$  tra i baricentri delle basi del prisma:

$$V = S_0 \cdot h_G$$

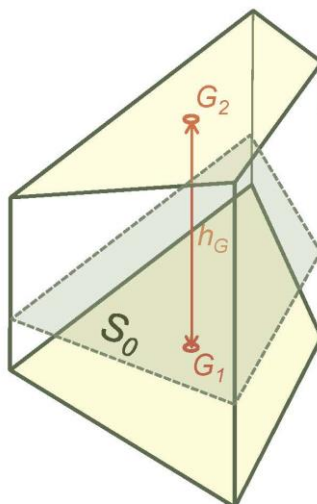

Fig. 2 – Solido prismatico

Nel caso semplificato di prisma a base triangolare la distanza  $h_G$  tra i baricentri delle basi coincide con la media delle altezze degli spigoli:

$$V = S_0 \cdot \frac{a + b + c}{3}$$

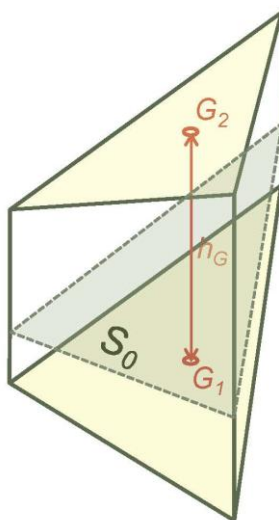

Fig. 3 – Prisma a base triangolare

Nel nostro contesto i prismi hanno gli spigoli verticali, dunque la sezione normale è contenuta in un piano orizzontale (quindi se  $S_0$  è l'area topografica:  $S = S_0$ ) e le loro altezze rappresentano le quote rosse  $q_i$  dei punti del terreno:

$$V = S \cdot \frac{q_1 + q_2 + q_3}{3}$$

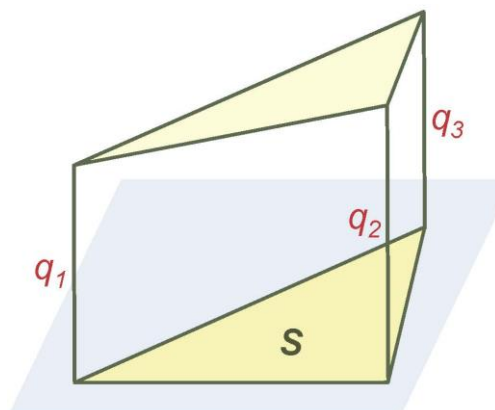

Fig. 4 – Prisma a spigoli verticali

Nel caso di più prismi adiacenti il volume complessivo è fornito dalla somma dei volumi dei singoli prismi:

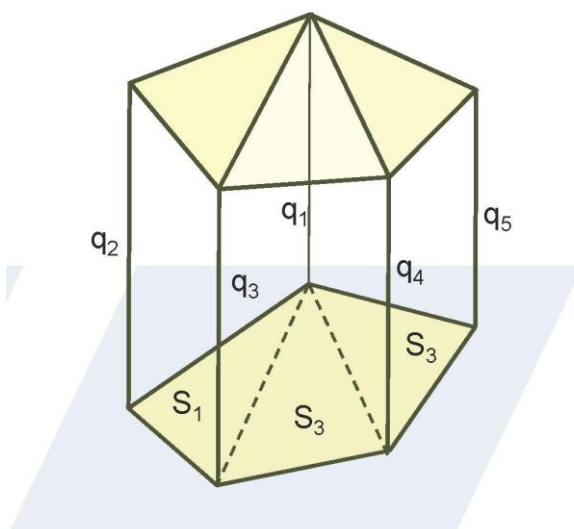

Fig. 5 – Prismi adiacenti

## 2 Calcolo volumi

### 2.1 Volume della vasca vuota

Per il calcolo dei volumi di abbancamento rifiuti si è partiti dal solido 3D che rappresenta la vasca nella sua configurazione iniziale prima del conferimento dei rifiuti, questi elaborati ci sono stati forniti dai progettisti in quanto l'opera non è ancora stata realizzata (cfr elaborati di progetto discarica).

Questo solido è stato trasformato in superficie triangolata molto dettagliata al fine di descrivere in maniera ottimale l'effettiva geometria del solido stesso ed avere una corrispondenza pressoché univoca fra la superficie di calcolo e quella di progetto.

Fig. 6 – Schema grafico della vasca - planimetria

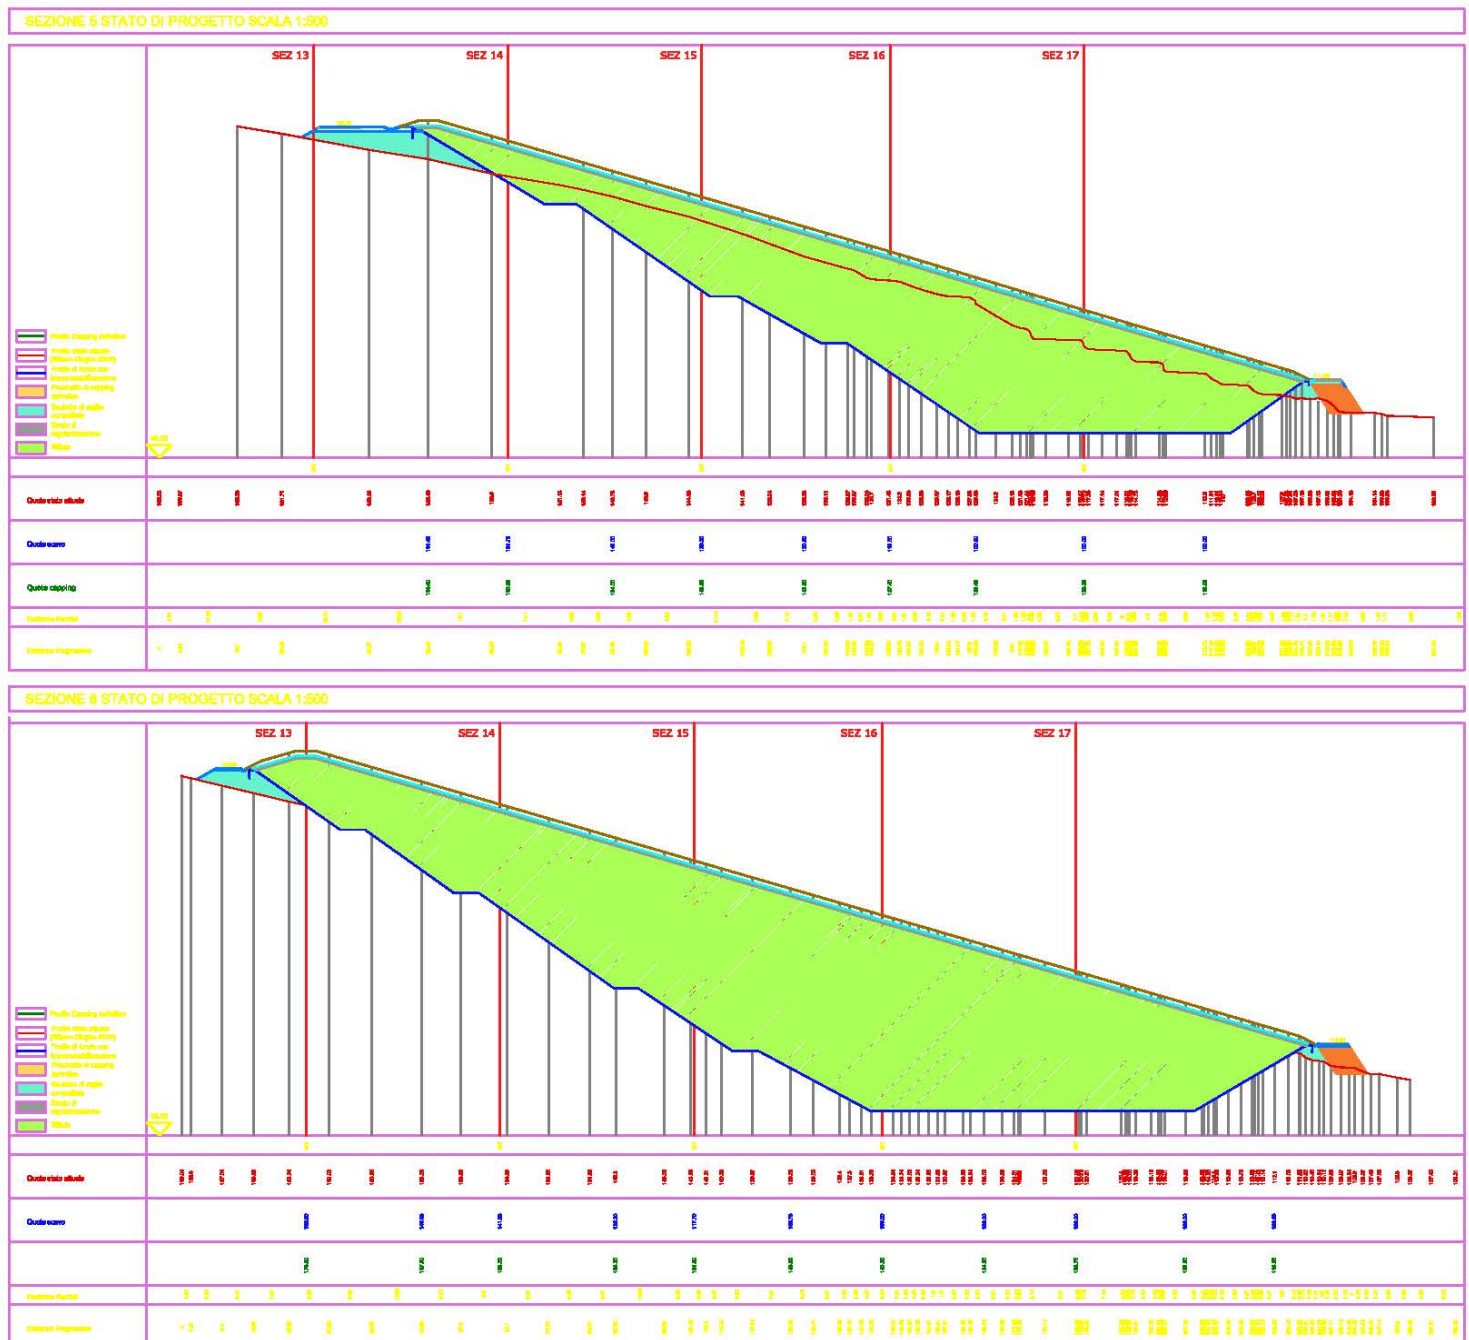

## RELAZIONE CALCOLO VOLUMI

## 2.2 Volume della vasca piena

A partire dagli elaborati progettuali che ci sono stati forniti si è ricostruito il solido che rappresenta la sommità del livello dei rifiuti abbancati al netto de capping di copertura.

Anche questo solido è stato convertito in superficie triangolata molto dettagliata al fine di descriverne in maniera ottimale l'effettiva geometria.

Nell'immagine allegata si possono vedere due dei profili utilizzati per ricostruire il volume dei rifiuti abbancati. Per gli elaborati completi fare riferimento al progetto presentato.

*Fig. 7 – Schema grafico della vasca – sezioni 5 e 6*

### 3 Calcolo volumi

#### 3.1 Software utilizzato

Per il calcolo dei volumi è stato utilizzato il software Meridiana della GeoPro S.r.l., software leader in Italia per la topografia, nella sua ultima versione disponibile.

#### 3.2 Risultati

Facendo analizzare al software il file denominato "Volume rifiuti", che rappresenta il volume massimo dei rifiuti al netto del capping, e confrontandolo con il file denominato "Volume discarica", che rappresenta il volume della vasca vuota, si ottiene un volume di rifiuti abbancati pari a 809.487,70 mc.

### CALCOLO VOLUMI

Calcolo del volume del rilievo	:Rilievo (Volume Rifiuti.gpo)	
Rispetto al rilievo di riferimento	:Rilievo (Volume discarica.gpo)	
Superficie orizzontale considerata (intersezione fra i due rilievi)	: 61893.184	[m2]
Superficie del solido sulla superficie considerata	: 66156.092	[m2]
Volume totale di riporto rispetto al rilievo di riferimento	: 809487.70	[m3]

**Tab. 1 – Tabella calcolo volumi**

#### 3.3 Tabulati di calcolo

I tabulati di calcolo, relativi alla metodologia dei solidi prismatici, prodotti dal software sono allegati alla presente soltanto in formato digitale essendo composti da circa 1950 pagine in formato A4.

Il tecnico  
 Geom. Giulio De Carolis
